

Artists impression of the proposed development

**Thank you for visiting this virtual exhibition about our plans for the development of a new energy recovery facility (ERF) at Overwood Farm, on the Dovesdale Complex.**

The proposed ERF will divert 330,000 tonnes per annum of non-recyclable waste from landfill. In 2019, Scotland sent 1.4m tonnes of non-recyclable waste to landfill. If the infrastructure existed, this waste could be sent to an ERF and turned into energy.

Due to current constraints on organising public events, we are hosting two virtual exhibitions where you can find detailed information about our proposals online. The second virtual exhibition will be online from 1st April 2021 and will provide further information.

During both virtual exhibitions there will be two opportunities to chat to members of the project team via scheduled live chat sessions. The live chat events will take place on:

- Thursday 18th February 2021 - 2pm to 6pm
- Thursday 25th February 2021 - 4pm to 8pm
- Thursday 8th April 2021 – 2pm to 6pm
- Thursday 15th April 2021 – 4pm to 8pm

You are welcome to join us by revisiting this virtual exhibition during these times and clicking on the live chat function button.

### **About Viridor**

Founded in 1957, Viridor is one of the largest recycling, energy recovery and waste management companies in the UK.

We work in partnership with more than 150 local authorities and major clients with 34,000 customers across the UK, transforming waste into resources which can be returned to the circular economy.

In 2019/20 Viridor diverted 5.5 million tonnes of waste from landfill. 2.6 million tonnes were recycled through its network of 16 material recycling facilities and energy was recovered from 2.9 million tonnes of non-recyclable waste by its fleet of 10 ERFs.

Our 10 energy recovery facilities, including two in Scotland in Glasgow and Dunbar, produce enough electricity to power the equivalent of 500,000 homes.
